## REPARTIȚIA DIRICHLET GENERALIZATĂ

M. CRAIU și V. CRAIU

Fie  $x_1, x_2, ..., x_{k+1}$  variabile aleatoare independente care au repartițiile gamma generalizate

$$f(x_i, a_i, \alpha_i, \beta_i) = \frac{\alpha_i}{(a_i)^{\beta_i/\alpha_i} \Gamma(\beta_i/\alpha_i)} x_i^{\beta_i-1} \exp\left(-\frac{x_i^{\alpha_i}}{a_i^{\alpha_i}}\right).$$

$$x_i > 0, \alpha_i > 0, \beta_i > 0$$

Fie

$$y_i = \frac{x_i}{x_1 + \dots + x_{k+1}}, \quad i = 1, \dots, k$$

Ne propunem să determinăm repartiția vectorului  $(y_1, ..., y_k)$ , pe care o vom numi repartiția Dirichlet generalizată.

Repartiția lui  $(x_1, ..., x_{k+1})$  este

$$\prod_{i=1}^{k+1} f(x_i) = \prod_{i=1}^{k+1} \frac{\alpha_i}{(\alpha_i)^{\beta_i/\alpha_i} \Gamma(\beta_i/\alpha_i)} x_i^{\beta_i-1} \exp\left(-\frac{x_i^{\alpha_i}}{x_i^{\alpha_i}}\right).$$

Se face schimbarea de variabile

$$\begin{array}{l} x_1 + \ldots + x_{k+1} = z \\ x_1 = y_1 z \\ x_2 = y_2 z \\ \vdots \\ \vdots \\ x_k = y_k z, \quad y_i \geqslant 0, \quad y_1 + y_2 + \ldots + y_k \leqslant 1. \end{array}$$

Cu aceasta repartiția lui  $(y_1 \dots y_k)$  devine

$$\begin{split} h(y_1,...,y_k) &= A \int_0^{\infty} \prod_{i=1}^k y_i^{\beta_i - 1} \ z^{k+1 \choose i} \beta_i - 1 \\ &\times \exp{-\left(\left(\frac{y_1 z}{a_1}\right)^{\alpha_1} + \left(\frac{y_2 z}{a_2}\right)^{\alpha_2} + \cdots + \left(\frac{y_k z}{a_k}\right)^{\alpha_k} + \left(\frac{z(1 - y_1 - \dots - y_k)}{a_{k+1}}\right)^{\alpha_{k+1}}\right)} \mathrm{d}z \end{split}$$

unde

$$A = \prod_{1}^{k+1} \frac{\alpha_{i}}{a_{i}^{\beta_{i}/\alpha_{i}} \Gamma(\beta_{i}/\alpha_{i})}$$

sau.

$$\begin{split} h(y_1, \dots, y_k) &= \prod_{i=1}^{k+1} \frac{\alpha_i}{a_i^{\beta_i l' \alpha_i} \Gamma(\beta_i l' \alpha_i)} \cdot \prod_{i=1}^k y_i^{\beta_i - 1} \left( 1 - y_1 - \dots - y_k \right)^{\beta_{k+1} - 1} \times \\ &\times \int_0^\infty z^{\sum_{i=1}^{k+1} \beta_i - 1} \exp \left( \left( \frac{y_1 z}{a_1} \right)^{\alpha_1} + \left( \frac{y_2 z}{a_2} \right)^{\alpha_i} + \dots + \left( \frac{y_k z}{a_k} \right)^{\alpha_k} + \\ &\quad + \left( \frac{z(1 - y_1 \dots - y_k)}{a_{k+1}} \right)^{\alpha_{k+1}} \right) \mathrm{d}z. \end{split}$$

În cazul particular în care

$$\alpha_1 = \alpha_2 = \dots = \alpha_{k+1} = 1$$
 $a_1 = a_2 = \dots = a_{k+1} = 1$ 

se obține

$$h(y_1,...,y_k) = \frac{1}{\Gamma(\beta_1) \dots \Gamma(\beta_{k+1})} \prod_{i=1}^k y_i^{\beta_i - 1} (1 - y_1 - \dots - y_k)^{\beta_{k+1} - 1} \times \int_0^\infty z^{\sum_{i=1}^{k+1} \beta_i - 1} e^{-z} dz$$

sau

$$h(y_1,...,y_k) = \frac{\Gamma(\beta_1 + ... + \beta_{k+1})}{\Gamma(\beta_1) ... \Gamma(\beta_{k+1})} \prod_{i=1}^k y_i^{\beta_i - 1} (1 - y_1 - ... - y_k)^{\beta_{k+1} - 1}$$

adică repartiția simplă a lui Dirichlet.

În cazul în care

$$\alpha_{1} = \alpha_{2} = \dots = \alpha_{k+1} = \alpha, \quad (1) \text{ devine}$$

$$(1') h(y_{1}, \dots, y_{k}) = \frac{\alpha^{k+1}}{\prod\limits_{i=1}^{k} \alpha_{i}^{\beta_{i}/\alpha} \Gamma\left(\frac{\beta_{i}}{\alpha}\right)} \prod\limits_{i=1}^{k} y_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1}-1} \times \prod\limits_{i=1}^{k+1} \alpha_{i}^{\beta_{i}-1} \left(1 - y_{1} - \dots - y_{k}\right)^{\beta_{k+1$$

$$\times \int_0^\infty z^{\sum_{1}^{k+1}\beta_i-1} \exp -z^{\alpha} \left[ \left( \frac{y_1}{a_1} \right)^{\alpha} + \left( \frac{y_2}{a_2} \right)^{\alpha} + \cdots + \left( \frac{1-y_1-...-y_k}{a_{k+1}} \right)^{\alpha} \right] \mathrm{d}z.$$

Cu schimbarea de variabilă

$$z = u^{\frac{1}{\alpha}} \left[ \left( \frac{y_1}{a_1} \right)^{\alpha} + \cdots + \left( \frac{y_k}{a_k} \right)^{\alpha} + \left( \frac{1 - y_1 - \dots - y_k}{a_{k+1}} \right)^{\alpha} \right]^{-\frac{1}{\alpha}}$$

(1') devine

$$h(y_{1},...,y_{k}) = \frac{\alpha^{k}}{\prod\limits_{i=1}^{k+1} a_{i}^{\beta_{i}/\alpha} \Gamma\left(\frac{\beta_{i}}{\alpha}\right)} \prod\limits_{i=1}^{k} y_{i}^{\beta_{i}-1} (1-y_{1}-...-y_{k})^{\beta_{k+1}-1} \times \left[\left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right]^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left[\left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right]^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left[\left(\frac{\beta_{1}+\beta_{2}+...+\beta_{k+1}}{\alpha}\right) \prod\limits_{i=1}^{k} y_{i}^{\beta_{i}-1} (1-y_{1}-...-y_{k})^{\beta_{k+1}-1} \times \left(\left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right]^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left(\left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right)^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right)^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right)^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}\right)^{-\frac{\sum\limits_{i=1}^{k+1} \beta_{i}}{\alpha}} \times \left(\frac{y_{1}}{a_{1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha} + \cdots + \left(\frac{y_{k}}{a_{k}}\right)^{\alpha} + \left(\frac{1-y_{1}-...-y_{k}}{a_{k+1}}\right)^{\alpha}$$

Observație: În cazul k=1, (1) devine repartiția  $\beta$  generalizată studiată în [2].

В работе определяется и изучается распределение Дирихле в интегральной форме

### THE GENERALIZED DIRECHLET REPARTITION

ABSTRACT

In this paper one define and one utilise the Dirichlet repartition in an integral form.
